NSO TECHNOLOGY FUTURE AT PLAY

The collection of NSO socks, developed by the Research & Development team to answer François D'haene needs and validated on racing field, features ceramic particles to self-activate your body's natural energy flow, enhancing muscle tone, recovery and overall balance.

COMPRESSION TECHNOLOGY FOR THE ATHLETE'S NEEDS

GRADUATED COMPRESSION

Limits muscular vibrations of the calf while it improves blood circulation. It is meant to be used during high exertion sport for enduring performance.

KEY FEATURES

FIT

Specially shaped welt

For comfort.

(Gp)

Anatomical fit Specially shaped toe box construction imitating the left and right foot anatomy which ensures a perfect fit.

Free flexion area Specially knitted area on the dorsal part of the foot and the sole enhances flexibility.

PROTECTION

Compression

Limits muscular vibrations of the calf and helps improve blood circulation.

Toe protectionA combination of flat toe seam, terry toe box and materials used to give superior comfort in the toe area.

Anti blister

Nanoglide® fiber used in the heel and toe of the sock significantly reduces the friction between sock and skin,

eliminating blisters and irritations.

Ankle bone protection

High density terry area to protect the ankle bones during the runs.

Shinebone protection

High density terry to protect the shin bone area.

STABILITY

Elastic arch support Specially designed elastic for better arch support and no sliding.

Elastic ankle support Elastic band or complete elastic knitting around the ankle for maximum stability.

Non sliding sole Special silicone applications or yarns on the sock's sole to prevent any sliding inside the shoe.

MOISTURE MANAGEMENT

Evacuate sweat Feature given by fibres with moisture transport properties like polypropylene or microfibres.

Ventilated Specially constructed mesh areas enable better air circulation and faster moisture transport.

MISC

Visibility Reflective application or reflective yarn used ensure better visibility of the runner in the darkness.

Energy return

Quantum energy®, the special bioceramic material used, using the FIR return technology, enhances the micro-circulatory system.

Anti-odor Inhibits the growth of bacteria increasing hygiene.

(§)

Recycled

Yarns obtained mainly from recycled materials, being in many cases recyclable themselves.

FIBERS OVERVIEW

COMFORT

Lycra®

Adding as little as 2 to 3 percent of Lycra® to cotton or wool allows socks to acquire superior staying power and ultimate stretch. This assures superior wear, comfort, excellent size stability and uniform appearance. Socks with Lycra® retain their size and shape after repeated wear and laundering.

Cotton

Cotton is a soft, natural fibre that absorbs moisture easily and draws heat away from the skin to keep you cool, making sock comfortable to wear. It can absorb up to one fifth of its weight in water before it feels damp. The fabric doesn't irritate skin or cause static electricity.

HEAT TRANSFER

NerinoG®

The distinctive features of the NerinoG® fibre make it particularly suited to the manufacturing of socks. Its top hydrophilic performance enables it to retain and expel liquids, thus sweat, ensuring maximum breathability, freshness, and dryness on the skin; its extreme softness lends it an unparalleled feeling of comfort and wellbeing on the body. Another special feature of the new NerinoG® fibre is its action against bacteria with their subsequent minimum proliferation.

Quantum Energy®

QUANTUM ENERGY® is an healthcare, high-functional textile fiber that radiates natural quantum energy. It has cooling or warming functions depending on the outer weather conditions, anti bacteria properties and it absorbs and dries sweat and moisture very fast.

Merino Wool

The highest, finest type of wool obtainable. It does not itch and is shrink treated to hold its size and shape.

MOISTURE MANAGEMENT

Dryarn®

Dryarn® is a high-pefromance fibre, an innovative yarn designed for socks and apparel that are practical and comfortable to wear. Lightweight, insulating, breathable: Dryarn® is the athlete's best performance enhancer.

Polypropylene

Polypropylene Isolfil® fibres have the lowest thermal conductivity of all the other fibres. Its unique vapour transfer ability (wicking) moves perspiration quickly and naturally away from the body to the outside where the moisture then evaporates. It's durable, easily washable and odour-free.

Microlon®

Microlon® is a nylon microfibre. It has exceptional characteristics with ultra-soft handling, perfect comfort, resistance to wear-and-tear and ease of care. Microlon® is not subject to the heat stress typical of traditional dying techniques and maintains the considerable benefits of microfibres in the finished fabric.

Drvtex®

Drytex® represents the next generation of 100% polyester yarn, high performance, breathability and comfort. It can instantly transfer body moisture from the skin to the outer surface of the sock, helping to keep the foot dry with a pleasant sense of wellbeing.

Polyester Gerona

100% polyester, it guarantees an improved comfort doing sport. It facilitates transfer of perspiration and sweat evaporation, keeping a soft and pleasant handle with a fresh feeling. It's easy to care: easy washing, drying and ironing and has "wrinkle free" characteristics.

DURABILITY

NanoGlide®

It significantly reduces friction between the sock and the skin, eliminating blisters and irritations, and guaranteeing the comfort and performance that an active person demands.

COOLING

NILIT® BREEZE

NILIT Breeze®

A specialty yarn for summer, NILIT Breeze® creates soft-touch, comfortable hosiery with a unique cooling effect.

MISC I

Recycled Polyamide We use recycled yarn fiber obtained from discarded nylon materials, thus renewing the nylon life cycle. Our recycled nylon delivers the same quality and performance to standard yarns.

Reflective yarn

Yarn featuring a high light reflecting power, aiding the visibility in nighttime sport activities.

Q-nova®

Q-NOVA® is an environmentally-sustainable nylon 6.6 fibre obtained from regenerated raw materials and which meets given traceability requirements. It's breathable, lightweight and retains its brilliant colors.

Grapehene

Bacterio-static and odor control fiber, easy to care, washable and eco-friendly
